Re: 'Statistics Companion' student booklet

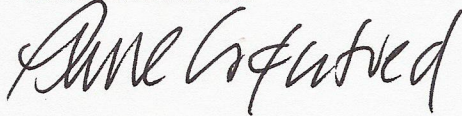

I hereby recommend 'Statistics Companion' by Erik Bøye.

I found the book extremely helpful for the Statistics subject during my BA study in Denmark. It is designed as a help to understand the 800+ pages text books that are typically used for the course, and it explains basic statistical models in a concise, short and simple manner.

The author was encouraged by students (including me) to translate the book into English to make it available to a wider audience. He eventually did so, and here it is!

Kind regards,

Anne Groentved
